Exercise for
Requirements Engineering,
Software Engineering and
Software Quality and Testing

Game Mill

Write the requirements for the game "Mill". A player must be able to place a token and then play against another player or the computer.

The game must detect if one of the players has a mil and stop the game.

The goal for the analysis phase is to define functional and non-functional requirements based on the rules of the game.

At the end of the requirements engineering exercise, a specification hast to available, which is the starting point for the exercise in software engineering.
